food with confidence*

Feel good DENTISTRY

“As we get older, our face will change.
You need teeth to get better support and look younger.”

ASH PARMAR

Alan had six upper implants and a “bar supported denture”.

*“I can now eat whatever
I want, and it’s actually a job
getting my denture out!”*

ALAN

CASE TREATED BY
Dr Andreas Weigt
(implantologist/oral surgeon)
& Dr Ash Parmar

“Ash, make sure you tell your patients to look after their teeth; as we get older, one of the pleasures of life is enjoying good food, and you need your teeth.”

This conversation with my mother inspired me to create this information brochure. My goal is to guide people in lay terms the best options to replace missing teeth.

Ash Parmar

Options For Gaps (Missing Teeth)

LEAVE THE GAP AND DO NOTHING

However, this will make you feel embarrassed and not want to smile confidently. It will also affect your speech and function.

A DENTURE

It is possible to wear a removable plastic (or metal based) denture to replace one or more teeth. However, dentures tend to move around and can be uncomfortable.

A BRIDGE

A fixed option to replace one tooth, or small group of teeth. This is a strong, long lasting and highly cosmetic option.

DENTAL IMPLANTS

Dental implants are small titanium screws, which offer the best long-term solution for most cases. You can eat whatever you want with confidence!

THERE ARE SOME OTHER OPTIONS TO ALSO CONSIDER:

- A Maryland bridge (for one missing tooth)
- A fibre/composite bridge (for one missing tooth)
- A precision attachment denture (for multiple missing teeth)

10 Important Things To Consider

Fixed or removable option?

1

It is important to decide on the final outcome desired. Many people request to have a fixed option as they want to avoid removable, plastic dentures.

How healthy are your teeth?

2

Having strong, decay-free teeth and healthy gums is vital before you consider options such as dental implants or fixed bridges.

Do I have enough bone for implants?

3

An X-ray or a CT Scan can help measure how much bone is available for the placement of implants. Otherwise, you may need to consider bone grafting first.

The skill and experience of the implant surgeon

4

Our implantologist Andreas has placed over 10,000 implants and carried out over 10,000 bone grafting procedures. This should give you total confidence.

Which implant system is used?

5

We only use Straumann, one of the leading implant companies in the world. This will ensure comfortable and predictable results.

10 Important Things To Consider

How long will treatment take?

6

Treatment such as bridges and dentures can be provided within a few weeks. Implant treatment can take between 4 to 15 months to carry out.

How will the end result look?

7

An experienced dentist like Ash and a skilled dental technician can work closely together to create a natural and beautiful smile to suit you as an individual.

How long will the treatment last?

8

Implants have a success rate of over 95% after 15 years. Bridges can last over 10 years. A denture can last for many years, but may need to be relined or remade in due course.

Is smoking important?

9

Smoking has been linked to gum disease (i.e. loosening of teeth). It can also reduce the success rate of dental implants in the long-term.

How much does the treatment cost?

10

Depending on your goals and budget, a suitable treatment plan can be chosen. We also offer 0% interest financing.
